

Sustainability policy

Prescie

We want to minimise our environmental impact by reducing waste, reusing materials, and recycling as much as possible. We vigorously promote this within our own operations, and encourage our customers to do the same. We also ensure our suppliers meet our standards wherever they apply.

Our aims

The aim of the policy is to set out how we manage our use of raw materials, and how much waste our operations are both directly, and indirectly responsible for.

Our policy

- To reduce the amount of packaging our operations are responsible for, to an absolute minimum.
- To use, and promote the use of, widely recycled materials such as paper and card as opposed to plastic and plastic films.
- To use, and promote the use of, verifiable recycled materials.
- To ensure all packaging is sourced inline with our Ethical sourcing policy.
- To make it easy for our customers and end users, to recycle both our packaging and products when they reach the end of their service life. We do this by clearly labelling all materials, and using easily recyclable materials wherever we can.
- Wherever possible we source as many products and services from nearby to our Stockport factory.
- We only accept paper and wood products, or products containing paper and wood, which meet one or more of the following (shown in order of preference):
 - Forest Stewardship Council® (FSC®) certification
 - Programme for the Endorsement of Forest Certification (PEFC) certification
 - verified / certified as recycled or reused
- Reduce to an absolute minimum the amount of waste our operations are responsible for. We do this by re-using as many materials as possible, and where materials cannot be re-used we recycle as much as possible. Our factory regularly recycles:
 - Paper & card
 - Metals
 - Wood
 - Plastic films
 - WEEE

Scope

We apply this policy to ourselves and our suppliers, and wherever possible we encourage our customers to do the same.
